_____

This one we were sitting onthe front row in front of the stage. We hear what sounds like one of the seats flip up behind us then while we are talking about the noise we just heard you can hear someone walking around on the stage. towards the end it sounds like runs across the stage. To us it sounded like noise coming from the far corner of the stage. We put a flahlight back in that corner and for the first time we actually see it start to come on and flash a few times it also was rolling across the table. Now the flashlight was in two pieces you actually have to put it back together and we had a ball on the table that lights up when it moves and it never moved.
