Ghosts & Poltergeists gravitational disturbances

_____

This was on Twitter and I wanted to share it:

Question: "Can Ghosts & Poltergeists be explained with gravitational disturbances?

As time is linked to gravity – should we be looking at local changes in gravitational fields ?

We don’t even know how gravity is created – but it SEEMS constant.

If the local gravitational field changes – then time in that area changes also. Not only do small objects appear to fly across rooms with uncanny movements, but sounds (evp) that were travelling through that space may be heard many years later. Even Ghosts may be seen in this disturbance.

How many of us have read or whitnessed items going missing – only to reappear somewhere we have already looked? This distortion in time may actually cause an item not to exist in either position at all – untill it times out – to when it was placed.

Is anyone measuring local gravity during investigations ?

Yes I did spot 6 F’s in the test. I bet if you look at these sentences you can’t spot the the deliberate mistake?"
