# Paranormal Investigation Module

Posted by crystalcross - 29 Sep 2011 01:17

_____

We've started a project to develop a web based application for G&H site for Paranormal Case management. Currently its still in the early stages and mainly just looking for ideas and input. Anyone interested in joining the project please go to "Profile" and click on "My Projects". From there you can join the case manager project.

What we're looking for is a few more investigators who are members of agencies, who have a real need for managing their cases. Also we're in need of 1-3 more PHP programmers with extensive php experience and web design. There's no real money involved, but I think we can create a great product that everyone can use.

_____

That sounds wonderful CC. I've been using the outdated clumsy Ghost Tech P.I. program or MS Access.

**IN NEED OF HELP on Case Manager Software**

I've come to a bit of an impasse on the Case Manager software. One of the key features of the case manager involves dealing with Audio files. Well to make this useful it has to be done in flash, and must make use of something known as a WaveForm class which is only present in Flash10.

My currently developer suite (CS3) does not work with Flash10, but rather only Flash9. So unless I go to spend a considerable amount of money or convert the entire project to Flex (very time consuming) I'm going to need some assistance from someone who knows flash and has CS4 or newer.

If you are or know of someone who fits that description and would like to help out with this project. Please contact me ASAP. Assistance would be very much appreciated.

I would love any help I can get, I am not a part of any group. I am more of a solo enterprise, just looking for answers. So any help would be great.
