Interesting. There seems to be a lot of background noise that can make this open to debate.

I was thinking the exact same thing. Seems to be a band playing in the background. Its difficult to tell where EVP starts and band ends. EVP sessions really should be conducted in a area without contamination if possible I know thats not always possible. In instances when its not, the other option is to have multiple recorders at various locations. At least that will help determine if its background or local to the subject.
